

Cable Connectors: Female IDC-Flat Ribbon Cable

Image may not represent actual part number.

ERNI manufactures an IDC flat ribbon cable D-Subminiature connector. The TMC-SK series are designed with the insulation displacement contacts on the termination side of the connector. The ends cut through the insulation of a flat ribbon cable and create high-pressure contact with the conductors. In a single step, ERNI's IDC Flat Ribbon Cable D-Sub allows for up to 37 conductors to connect without prior insulation stripping.

ERNI's IDC Flat Ribbon Cable TMC-SK series D-Subminiature connectors are designed to be used in conjunction with ribbon cable and create a reliable and economic termination for electrical connections.
