 QUAD D FLIP-FLOP
A version put on w/ note

**CONNECTION DIAGRAM
PINOUT A**

DESCRIPTION — The '175 is a high speed quad D flip-flop. The device is useful for general flip-flop requirements where clock and clear inputs are common. The information on the D inputs is stored during the LOW-to-HIGH clock transition. Both true and complemented outputs of each flip-flop are provided. A Master Reset input resets all flip-flops, independent of the Clock or D inputs, when LOW.

- EDGE-TRIGGERED D-TYPE INPUTS
- BUFFERED POSITIVE EDGE-TRIGGERED CLOCK
- ASYNCHRONOUS COMMON RESET
- TRUE AND COMPLEMENT OUTPUT

ORDERING CODE: See Section 9

FUNCTIONAL DESCRIPTION — The '175 consists of four edge-triggered D flip-flops with individual D inputs and Q and \bar{Q} outputs. The Clock and Master Reset are common. The four flip-flops will store the state of their individual D inputs on the LOW-to-HIGH clock (CP) transition, causing individual Q and \bar{Q} outputs to follow. A LOW input on the Master Reset (\bar{MR}) will force all Q outputs LOW and \bar{Q} outputs HIGH independent of Clock or Data inputs. The '175 is useful for general logic applications where a common Master Reset and Clock are acceptable.
