#### **I.2 DIELECTRIC TUNING ELEMENTS**

Dielectric Tuning Elements are used whenever the lowest loss tuning for high frequency applications is required. When dielectric rod is introduced into a cavity, the self resonant frequency is lowered due to the cavity "appearing" larger.

The basic dielectrics used in Temex-Ceramics Microwave Tuning Elements are sapphire, quartz and alumina.

Electrical properties of each dielectric material are:

Dielectric Material	Approximate Dielectric Constant @ 10 GHz	Approximate Dissipation Factor @ 10 GHz		
Sapphire	9.9	0.0001		
Quartz	3.8	0.0001		
Alumina	9.7	0.0002

Precautions to use rotor tunings:

Typical drilling diameter is the tap core diameter + 0.1 mm

Flange of machined threads has to be perfect, very smooth, without metallic burrs.

Use recommended tuning tool.

Before screwing the rotor, find the first thread by turning the anti-clockwise.
