

# Ceramic Resonators

SMD

4.0 to 50MHz

CCR(Built-in load capacity/External load capacity) series

Issue date: March 2009

- All specifications are subject to change without notice.
- Conformity to RoHS Directive: This means that, in conformity with EU Directive 2002/95/EC, lead, cadmium, mercury, hexavalent chromium, and specific bromine-based flame retardants, PBB and PBDE, have not been used, except for exempted applications.

# Ceramic Resonators(SMD)

## CCR Series

Conformity to RoHS Directive

**FEATURES**

- The CCR series are thin-type ceramic chip resonators. Thickness shear mode or 3rd over-tone thickness expansion mode element are used for both the 4.0 to 11.0MHz band and the 16.0 to 50.0MHz band.
  - Products with built-in loading capacitance have piezoelectric elements that are mounted onto a capacity-forming dielectric substrate.
- This eliminates the need for external capacitors, thus simplifying circuit requirements.
- Optimization of the temperature characteristics of both the piezoelectric element and dielectric materials has resulted in stable oscillating frequency.
  - Corresponds to reflow soldering. Moreover, it is possible to correspond Pb-free soldering.(260°C,10sec. max.)
  - Packaging style is emboss taping.
  - Setting or matching of oscillating frequency which correspond to new models, application IC or custom IC are also available, please contact TDK.

**TEMPERATURE RANGES**

Operating/Storage -40 to +85°C

## TYPICAL ELECTRICAL CHARACTERISTICS

### OSCILLATING FREQUENCY DRIFT OVER TEMPERATURE

MUC8/MXC8:  $\pm 0.3\%/-40$  to  $+85^\circ\text{C}$ (Standard)

CCR8.0MXC8

MXC7:  $\pm 0.2\%/-40$  to  $+85^\circ\text{C}$ (Standard)

CCR48.0MXC7

MYC7:  $\pm 0.2\%/-40$  to  $+85^\circ\text{C}$ (Standard)

CCR48.0MYC7T1

### OSCILLATING FREQUENCY AGING

MUC8/MXC8:  $\pm 0.2\%/10\text{years}$ (Standard)

CCR8.0MXC8

MXC7:  $\pm 0.1\%/10\text{years}$ (Standard)

CCR48.0MXC7

MYC7 :  $\pm 0.1\%/10\text{years}$ (Standard)

CCR48.0MYC7T1

**OSCILLATING FREQUENCY-TEMPERATURE  
CHARACTERISTIC MEASURING CIRCUIT**  
**MUC8/MXC8 TYPE 4.0 to 9.99MHz**

**MXC8 TYPE 10.0 to 11.0MHz**

**MXC7 TYPE 16.0 to 50.0MHz**

**MX7 TYPE 16.0 to 50.0MHz**

**MYC7 TYPE 24.0 to 50.0MHz**

**RELIABILITY AND TEST CONDITIONS**

The following test items are satisfied.

- (1) Oscillating frequency change: Within  $\pm 0.25\%$
- (2) Resonant resistance change: Within  $\pm 10\Omega$
- (3) Appearance; serious abnormalities not to exist.

Test items	Test conditions
Low temperature storage	Temperature: $-40 \pm 3^\circ\text{C}$ Time: 1000h
High temperature storage	Temperature: $+85 \pm 2^\circ\text{C}$ Time: 1000h
Loading humidity resistance	Humidity: 90 to 95(%RH) Temperature: $60 \pm 2^\circ\text{C}$ Time: 1000h
Thermal shock	$-40^\circ\text{C}$ (30min), $85^\circ\text{C}$ (30min) x 100 cycles
Soldering heat resistance	Solder temperature: peak $260^\circ\text{C}$ , 10s reflow
Drop	Drop 3 times onto the concrete from a height of 1m
Vibration	Frequency: $10 \leftrightarrow 55 \leftrightarrow 10\text{Hz/min}$ Amplitude: 1.5mm X, Y and Z directions for 2h each
Board bend test	Solder this product onto a glass epoxy board ( $L100 \times W40 \times T1.6\text{mm}$ ), press it by up to 1mm in 1mm/s and keep it for 5sec.
