

DS1630B/DS3630B Hex CMOS Compatible Buffer

General Description

The DS1630B/DS3630B is a high current buffer intended for use with CMOS circuits interfacing with peripherals requiring high drive currents. The DS1630B/DS3630B features low quiescent power consumption (typically $50 \mu\text{W}$) as well as high-speed driving of capacitive loads such as large MOS memories. The design of the DS1630B/DS3630B is such that V_{CC} current spikes commonly found in standard CMOS circuits cannot occur, thereby, reducing the total transient and average power when operating at high frequencies.

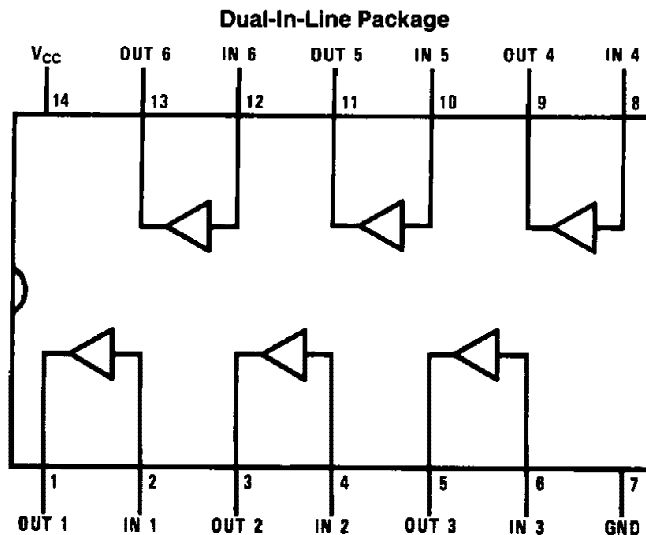

Features

- High-speed capacitive driver
- Wide supply voltage range
- Input/output may interface to TTL
- Input/output CMOS compatibility
- No internal transient V_{CC} current spikes
- $50 \mu\text{W}$ typical standby power

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. Except for "Operating Temperature Range" they are not meant to imply that the devices should be operating at these limits. The table of "Electrical Characteristics" provides conditions for actual device operation.

Note 2: Unless otherwise specified min/max limits apply across the $-55^\circ C$ to $+125^\circ C$ temperature range for the DS1630B and across the $0^\circ C$ to $+70^\circ C$ range for the DS3630B. All typicals are given for $V_{CC} = 5.0V$ and $T_A = 25^\circ C$.

Note 3: All currents into device pins shown as positive, out of device pins as negative, all voltages referenced to ground unless otherwise noted. All values shown as max or min on absolute value basis.
