

Coaxial cable connection of Antennas, Sensors, and Communication Trunk Lines

SAE/USCAR-19

Termination of coaxial cables in automotive, medical and instrumentation applications utilizes a single motion to crimp the center conductor, shield and outer insulation.

GT5 Series

— Connectors for coaxial shielded cables —

<Several types and configurations: In-line, board mounted, combinations of coaxial cable with signal/power, Multi-position and color/ keying variations.>

Features

- **USCAR Standard** titled "Square Outer Conductor (SAE/USCAR-19)" excludes Water Proof type (GT5W)
- **Cost efficient termination**
Highly efficient and reliable single motion "Twin CrimpTM" termination allows high volume production with semi-automatic equipment.
- **Space-saving Design**
- **Lock-release latching system**
- **Shock / vibration resistant electrical connections**
- **Verification of the full contact insertion**
- **Color and polarizing variations**
- **Excellent High Frequency Performance**
Refer to V.S.W.R. data on the following pages.

Applications

In-car communication, car sensors (temperature, pressure), automotive audio systems, GPS antenna systems, RACS antenna audio/video antenna systems, CRT displays, medical and measuring instrumentation, variety of communication equipment, office automation equipment, LAN systems.

*"Twin Crimp" is a registered trade mark of Hirose Electric.

GT5 Series

◆ Test Data (Using 1.5D-2V Type cable)

Note: Typical data using fully assembled and connected GT5-1S-HU and the GT5-1PP-HU.

◆ Termination sequence

1. Strip the cable.

2. Crimp the cable to the terminal.

3. Insert the terminal in the housing until is fully locked.

4. Fully insert the retainer.
