Dolby B- and C-Type Noise Reduction System

HITACHI

ADE-207-036B (Z)

3rd Edition
Jun. 1999

Description

HA12141/142NT, HA12170NT, HA12161/162FP are silicon monolithic bipolar IC series providing dual channel Dolby B- and C-type noise reduction* in one chip.

Functions

- Dual Dolby B/C-type NR processor
- NR OFF/B/C control switch
- MPX by-pass / Encode / Decode (MPX OFF / REC / PB) control switch
- MPX Filter Drive Circuit

Features

- Low external parts count
- R-C spectrum skewing network using passive component
- External capacitors are E-3 series (small values)
- Several time constant capacitors built into the IC
- Separate REC/PB input and output. Unprocessed signal output available in the encode and decode modes.
- Common PCB pattern is available with HA12134A series (Dolby B NR), because these ICs offer similar pin layout.
- 3 type PB-out level (300 mV, 580 mV, 775 mV)
- 2 type package (DP-30S, FP-28D)
- Wide range of operating supply voltage (7.5 V to 16 V)

* Dolby is a trademark of Dolby Laboratories Licensing Corporation.
A license from Dolby Laboratories Licensing Corporation is required for the use of this IC.

Functional Description

Power Supply Range

HA12141 series are designed to operate on either single supply or split supply. The operating range of the supply voltage is shown in table 1.

Table 1 Supply Voltage

Type No.	Single supply	Split supply
HA12141NT	7.5 to 16 volts	± 3.8 to ± 8 volts
HA1211161FP		
HA12142NT	9.5 to 16 volts	± 4.8 to ± 8 volts
HA12162FP		
HA12170NT	12 to 16 volts	± 6 to ± 8 volts

The lower limit of supply voltage depends on the line output reference level.

The minimum value of the overload margin is specified as 12 dB by Dolby Laboratories.

HA12141 series are provided with 3 line output level, which will permit an optimum overload margin for power supply conditions.

Reference Voltage

For the single supply operation these devices generate the reference voltage of half the supply voltage that is the signal grounds. As the peculiarity of these devices the capacitor for the ripple filter is very small about 1/100 compared with conventional devices.

The reference voltage supplies are provided for the left channel and the right channel. The block-diagram is shown as figure 1.

Figure 1 The Block-Diagram of Reference Voltage Supply

HA12141NT, HA12142NT, HA12170NT, HA12161FP, HA12162FP

Operation Mode Control

HA12141 series provide fully electronic switching circuits. The function are controlled by DC voltage and are NR OFF/B/C and PB/REC/MPX.

The switching truth tables are shown in table 2 and table 3.

Table 2 Switching Truth Table (NR OFF/B/C)

Function	Single supply	Split supply	Unit	Note
NR OFF	0 to $V_{cc}/2 - 3$	V_{ee} to -3	V	
B type	$V_{cc}/2 - 0.5$ to $V_{cc}/2 + 0.5$	-0.5 to 0.5	V	*1
C type	$V_{cc}/2 + 3$ to V_{cc}	3 to V_{cc}	V	

Note: 1. These functions are available for being open at NR B mode and REC mode

Table 3 Switching Truth Table (PB/REC/MPX)

Function	Single supply	Split supply	Unit	Note
Play back (Decode mode)	0 to 0.4	V_{ee} to $V_{ee} + 0.4$	V	
Record (Encode mode)	2.5 to $V_{cc}/2 + 0.5$	$V_{ee} + 2.5$ to 0.5	V	*1
MPX-OFF	$V_{cc} - 1$ to V_{cc}	$V_{cc} - 1$ to V_{cc}	V	*2

Notes: 1. These functions are available for being open at NR B mode and REC mode.

2. MPX-OFF mode control Voltage of HA12170NT is available with range from $V_{cc} - 2$ to V_{cc} .

MPX-off mode means that signal from input amp doesn't go through the MPX filter, but signal goes through the SS circuit after being attenuated 3 dB by internal resistor. Refer to figure 2.

Figure 2 The Block-Diagram of MPX Driving Circuit

It is to be desired that CR time constant circuits are provided at NR OFF/B/C terminal and PB/REC/MPX terminal with time constant from 0.1 sec to 1 sec. If so, it will reduce the switching click noise effectively.

Application Circuits

1. HA12161FP/62FP application

HA12161FP/62FP are developed for exclusive playback of car stereo players.

But these devices are provided with AUX input. This application providing AUX input is available for car stereo players and car stereo cassette decks.

AUX input will be useful for a tuner input. In this case PB/REC/MPX switching operates as the switching of PB/AUX1/AUX2.

HA12141NT, HA12142NT, HA12170NT, HA12161FP, HA12162FP

Figure 3 Application of HA12161FP/162FP

We show such application in figure 3. In this application there is 3dB difference between mode AUX1 and mode AUX2 of controlled terminal's pin 24.

Another application is show in figure 4. It is put in filter circuit between pin 6 or 23 and pin 7 or 22.

For example AUX1 mode is AM tuner input and AUX2 mode is FM tuner input respectively.

Figure 4 Application of AUX Mode

HA12141NT, HA12142NT, HA12170NT, HA12161FP, HA12162FP

2. Application for dubbing cassette decks.

HA12141 series has unprocessor signal from recording out terminals during playback mode.

So, it is simply applied for dubbing cassette decks.

2. Products and product specifications may be subject to change without notice. Confirm that you have received the latest product standards or specifications before final design, purchase or use.
3. Hitachi makes every attempt to ensure that its products are of high quality and reliability. However, contact Hitachi's sales office before using the product in an application that demands especially high quality and reliability or where its failure or malfunction may directly threaten human life or cause risk of bodily injury, such as aerospace, aeronautics, nuclear power, combustion control, transportation, traffic, safety equipment or medical equipment for life support.
4. Design your application so that the product is used within the ranges guaranteed by Hitachi particularly for maximum rating, operating supply voltage range, heat radiation characteristics, installation conditions and other characteristics. Hitachi bears no responsibility for failure or damage when used beyond the guaranteed ranges. Even within the guaranteed ranges, consider normally foreseeable failure rates or failure modes in semiconductor devices and employ systemic measures such as fail-safes, so that the equipment incorporating Hitachi product does not cause bodily injury, fire or other consequential damage due to operation of the Hitachi product.
5. This product is not designed to be radiation resistant.
