

T-31-01

General Purpose Transistors

HXTR-3001 Chip

Technical Data

**HXTR-3101, TX and TXV
2N6838 (HXTR-3103, TX
and TXV)
HSMX-3131
HSMX-3151**

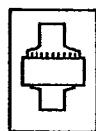

Features

- **High Gain**
15 dB Typical $|S_{21B}|^2$ at 1 GHz
- **High Output Power**
21 dBm P_{1dB} Typical at 1 GHz
- **Low Noise Figure**
1.5 dB Typical at 1 GHz
- **Large Gold Bonding Pads**
- **Available in Low Cost Hermetic and Surface Mount Packages**

Recommended Die Attach and Bonding Procedures

Eutectic Die Attach at a stage temperature of $410 \pm 10^\circ\text{C}$ under an N_2 ambient. Chip should be lightly scrubbed using a tweezer or collet and eutectic should flow within five seconds.

Thermocompression Wire Bond at a stage temperature of $310 \pm 10^\circ\text{C}$, using a tip force of 30 ± 5 grams with 0.7 or 1.0 mil gold wire. A one mil minimum wire clearance at the passivation edge is recommended. (Ultrasonic bonding is not recommended.)

Description

The HXTR-3001 is a low cost NPN silicon bipolar transistor chip designed for high gain and wide dynamic range at VHF, UHF, and microwave frequencies. The chip is silicon nitride passivated, and is provided with large gold bonding pads for ease of use in most hybrid applications.

The HXTR-3001 is available in several package styles. The HXTR-3101 and 2N6838 (HXTR-3103) are supplied in the HPAC-100X, a rugged low cost metal/ceramic package capable of meeting the environmental requirements of MIL-S-19500 and the test requirements of MIL-STD-750/883.

The HSMX-3131 and HSMX-3151 are the low cost plastic package versions that are supplied in the SOT-23 and SOT-143 surface mount packages respectively.

The HXTR-3001 chip is also offered in an 85-mil micro-plastic package with copper leads as the HXTR-3186 (bent lead version). These devices replace the 100-mil micro-plastic HXTR-3121 part with alloy 42 leads.

T _J	Junction Temperature	200°C	200°C	150°C
T _{STG}	Storage Temperature	-65°C to +300°C	-65°C to +150°C +250°C	-65°C to +150°C +260°C
-	Lead Temperature (Soldering 10 seconds each lead)			

*Operation in excess of any one of these conditions may result in permanent damage to this device.

Notes:

- Power dissipation derating should include a θ_{JA} (Junction-to-Back contact thermal resistance) of 65°C/W. Total θ_{JA} (Junction to Ambient) will be dependent upon the heat sinking provided in the individual application.
- A θ_{JC} maximum of 130°C/W should be used for derating and junction temperature calculations ($T_J = P_D \times \theta_{JC} + T_{OASE}$).
- A θ_{JA} of 500°C/C/W should be used for derating and junction temperature calculations ($T_J = P_D \times \theta_{JA} + T_A$).
- Maximum soldering temperature is 260°C for 5 seconds.

Ordering Information

See page 16-2 for information on ordering surface mount devices.

**High Reliability
Testing***

Two basic levels of High-Reliability testing are offered.

- The TX suffix indicates a part that is preconditioned and screened to the program shown in Table II and III, and is marked with an orange dot.
- The TXV suffix indicates that an internal visual inspection per MIL-STD-750 Method 2072 is included as part of the preconditioning screening and is marked with a green dot.

Group B quality conformance inspections are performed on

**Part Number System for Order
and RFQ Information**

Part Number Prefix	Screening Level
HXTR-3101 2N6838 (HXTR-3103)	Commercial
HXTR-3101TX 2N6838TX (HXTR-3101TX)	100% Screen (per Tables II and III)
HXTR-3101TXV 2N6838TXV (HXTR-3103TXV)	100% Screen and Internal Visual

each inspection lot in accordance with Table IVb. Group C quality conformance inspections are performed periodically at six month intervals in accordance with Table V.

*Please refer to MIL-S-19500 for Tables II, III, IVb, and V. High power visual performed on die prior to assembly.

T-31-01

100% Screen	Screened per MIL-S-19500, Table II, TX or TXV with the following specified tests and conditions:	
	HTRB Test (Screen 10)*	Delete HTRB
	Pre Burn In Tests (Screen 11)*	All DC parameters; BV_{CBO} , BV_{CEO} , I_{CBO} , I_{CEO} and h_{FE} at $25^\circ C$, per data sheet Electrical Specifications table
	Burn In Conditions (Screen 12)*	$P_T = 300 \text{ mW}$, $T_A = 25^\circ C$
	Post Burn In Tests (Screen 13)*	HXTR-3101 All DC parameters; BV_{CBO} , I_{CBO} , I_{CEO} , and h_{FE} at $25^\circ C$, per data sheet Electrical Specifications table
		HXTR-3103 All DC parameters; BV_{CBO} , BV_{CEO} , I_{CBO} , I_{CEO} , and h_{FE} at $25^\circ C$, per data sheet Electrical Specifications table
Group A	Per MIL-S-19500, Table III, and the following:	
	Subgroup 2	HXTR-3101 BV_{CEO} , I_{CBO} , I_{CEO} and h_{FE} at $25^\circ C$ per data sheet Electrical Specifications table
		HXTR-3103 BV_{CBO} , BV_{CEO} , I_{CBO} , I_{CEO} and h_{FE} at $25^\circ C$ per data sheet Electrical Specifications table
	Subgroup 3	$T_A = +150^\circ C$, $I_{CBO} = 5 \mu A$ at $V_{CB} = 15 \text{ V}$ $T_A = -55^\circ C$, $h_{FE} = 20$ minimum at $I_C = 10 \text{ mA}$, $V_{CE} = 10 \text{ V}$
	Subgroup 4	HXTR-3101 Not applicable
		HXTR-3103 f_v , $ S_{2IE} ^2$ and NF_{MIN} per data sheet Electrical Specifications table
	Subgroups 5, 6, and 7 are not applicable.	
Group B	Per MIL-S-19500, Table IVb. End point tests per Group A Subgroup 2, with the following conditions and exceptions:	
	Subgroup 3	Operating Life conditions same as 100% burn-in.
	except Subgroup 4	SEM, done prior to assembly
	except Subgroup 5	Thermal resistance, per MIL-STD-750 Method 3151
Group C	Per MIL-S-19500, Table V. No exceptions. End point tests per Group A Subgroup 2, and with the following conditions:	
	Subgroup 6	Operating Life conditions same as 100% burn-in.

*Refer to MIL-S-19500 screen numbers.
