

PRODUCT CODE SYSTEM

The part number, comprising 14 digits, is formed as follows:

1	2	3	4	5	6	7	8	9	10	11	12	13	14
L	D	E	-	-	-	-	-	-	-	-	-	-	-

Digit 1 to 3 Series code (L = leadless; DE = polyester family)

Digit 4 d.c. or a.c. rated voltage (V_R).

C = 50Vdc D = 63Vdc E =100Vdc
I = 250Vdc M = 400Vdc P =630Vdc

Digit 5 Size code:

12.06	12.10	18.12	22.20	28.24	40.30	50.40	60.54
A	B	C	D	E	F	G	H

Digits 6 to 9 Digits 7 - 8 - 9 indicate the first three digits of Capacitance value and the 6th digit indicates the number of zeros that must be added to obtain the Rated Capacitance in pF.

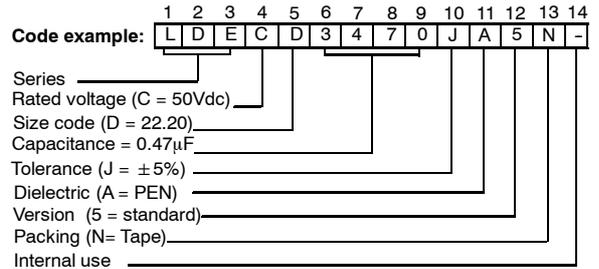

Digit 10 Capacitance tolerance: ±5% (J); ±10% (K); ±20% (M)

Digit 11 Dielectric (A = PEN; B = PET H.T.)

Digit 12 Version (0 = miniature; 5 = standard; A to Z = special)

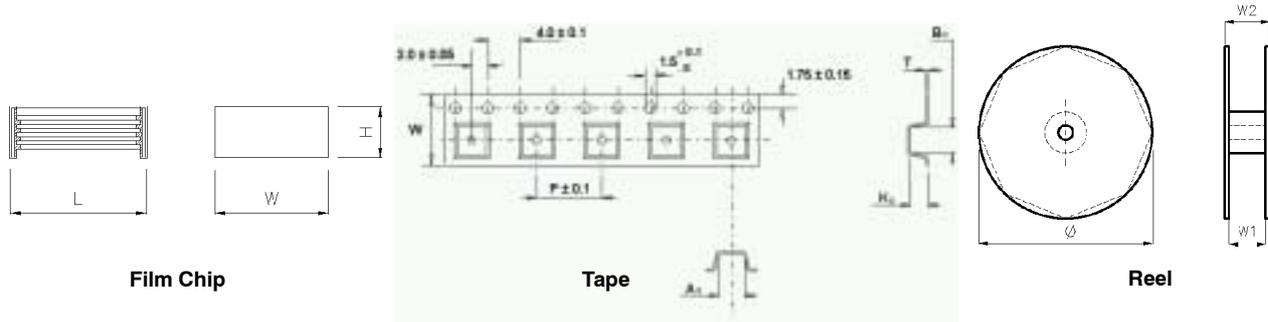

Digit 13 Packing (Loose = M; Tape = N; A to Z = special)

Digit 14 Internal use.

PACKAGING

- Taping and packaging characteristics

Size code	Chip dimensions			Tape and Reel characteristics									Packaging q.ties

All dimensions are in mm.

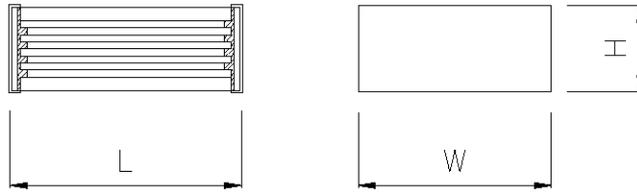

In accordance with IEC 60286-3.

Material used:

- Carrier tape: antistatic material
- Cover tape: polyester + PE
- Reel: recyclable polystyrene

All parts in bulk or on reel are packed in hermetically sealed moisture barrier bag (MBB).

MAX. VOLTAGE ($V_{r.m.s.}$) AND CURRENT ($I_{r.m.s.}$) VERSUS FREQUENCY
 (sinusoidal wave-form / $*T_h \leq 85^\circ\text{C}$)

Measure carried out in free air condition.

Note: $*T_h$ = max. ambient temperature surrounding the capacitor or hottest contact point (i.e. tracks), whichever is higher, in the worst operation conditions in $^\circ\text{C}$.

Preliminary

MOUNTING AND SOLDERING

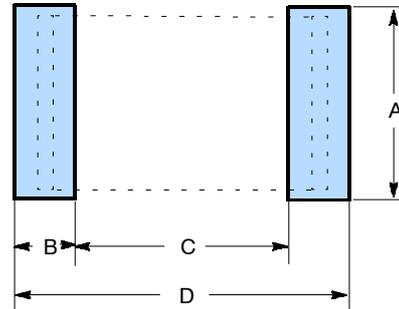

In order to reach a good solderability, we suggest these rules are followed:

- **Landing area**

Land dimensions

Size	A	B	C	D
1206	2.0	1.3	2.4	5.0
1210	3.0	1.3	2.4	5.0
1812	4.0	1.5	3.5	6.5
2220	5.9	1.9	4.5	8.3
2824	7.0	2.5	5.7	10.7
4030	8.6	3.0	8.0	14.0
5040	11.2	3.5	10.3	17.3
6054	14.6	3.6	12.6	19.8

Example for land dimensions

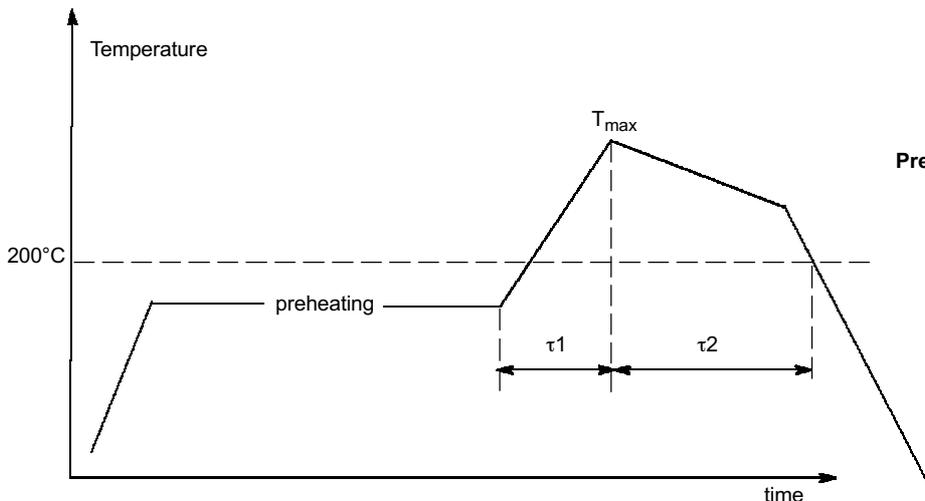

- **Solder paste & quantity**

To obtain the best performance we advise to use a solder paste alloy TIN (Sn) - LEAD (Pb) - SILVER (Ag) (typical values 62% - 36% - 2%) of no clean type. The thickness of solder paste is also important, and from our experience we suggest the following rule:

Size	Thickness [mm]
from 12.06 to 22.20	0.1 to 0.15
from 28.24 to 60.54	0.1 to 0.20

- **Thermal profile**

Preheating: Temperature = 150 to 160°C
Time = 3 min

Peak: Max time above 200°C
40 to 50 s and $\tau_1 \leq \tau_2$

T_{max}: from 12.06 to 22.20 T_{max} = 225°C
from 28.24 to 60.54 T_{max} = 235°C

MOISTURE BARRIER BAG (MBB)

- **Materials**

The MBB is made by three layers: PET, Aluminium and PE for a total thickness of 105 µm

- **Moisture resistance**

From size 12.06 to 60.54 Arcotronics has tested reels inside this MBB in different extreme conditions (i.e.: T = 60°C R.H. = 95% 56 days).

The result is: THE CAPACITANCE DOESN'T PRESENT ANY SIGNIFICATIVE CHANGE.

- **Use**

After the opening of the MBB the permanence at a temperature $\leq 30^\circ\text{C}$ and R.H. $\leq 60\%$ is allowed for a maximum lapse of time of 4 weeks.

For longer times and/or higher T and R.H. values, it is absolutely indispensable to protect the component against R.H.

If the reel is partially used, Arcotronics recommend the re-use of the same MBB or a storage in areas with controlled temperature and humidity.

- **Storage**

The minimum MBB shelf life is 12 months.

CAUTION

• **Hand assembly**

If PC boards are assembled by hand, care must be taken to avoid mechanical damage. We recommend:

- Use tweezers, the components should be gripped across the two terminals, A.
- Avoid any contact with the cut surface, C.
- The usage of a pen under vacuum on the surface B is recommended.

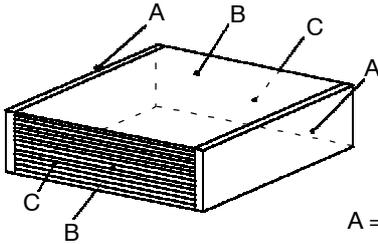

Fig. 1

A = Termination surface
 B = External surface
 C = Cut surface

• **Soldering iron**

In case of hand soldering the following recommendations must be taken:

- Maximum temperature: 250°C on the soldering iron.
- Soldering time: 5 s max.
- Avoid contact between the iron soldering and chip.

• **Soldering and flux recommendation**

- Solder: SnPb solder paste
- Flux: no-clean flux.

• **Cleaning**

To clean flux from the PC board assembly, use a suitable solvent such as Isopropylalcohol. Solvents such as Toluene, Xylene and Trichloroethylene should be avoided.

CORRECTIVE ACTIONS TABLE (problems after soldering process)

TYPE OF DEFECT	CAUSE	POSSIBLE SOLUTION / ACTION
No solder joint in one end termination	- wrong landing area	- see page 11 /end user
	- quality of solder paste	- see page 11 /end user
	- thermal profile	- see page 11 /end user
	- bad temperature distribution into the reflow oven	- decrease time of preheating or change the orientation of P.C.B. board/end user.
Mechanical deformation of the body	- too high temperature	- apply suggested thermal profile (page 11) / end user
	- too long time	- apply suggested thermal profile (page 11) / end user
	- moisture inside capacitor	- see use suggestion (page 11) / end user
Short circuit	- mechanical damage	- take care to hand assembly (page 12) / end user

Do not hesitate to contact our Technical Service for any doubt or more detailed information.
