

NTC Thermistors

Vishay

FEATURES

- Custom designed executions
- Application specific leads, housings, and connectors

PRODUCT DESCRIPTION	TYPE	TOLERANCE AT R25°C	RESISTANCE RANGE	OPERATING TEMPERATURE RANGE	APPLICATIONS
NTC Thermistors Screw terminal	2322 640 73...	5%	100 to 470k	-25 to +100°C	Heatsinks, vessel walls
NTC Thermistors Insulated leads	2322 645 20...	down to 1%	3k to 10k	-40 to +125°C	Automotive climate control
NTC Thermistors Non-insulated leads	2322 645 10...	down to 1%	3k to 10k	-40 to +125°C	General Industrial
NTC Thermistors PVC Long Leads, Epoxy	2322 641 2....	down to 3 %	2,2k to 470k	-40 to +80°C	Airconditioning
NTC Thermistors PVC Long Leads, Sleeved	2322 641 3....	down to 3 %	2,2k to 470k	-40 to +80°C	Fan-heaters
NTC Thermistors PVC Long Leads, Brass-pipe type	2322 641 4....	down to 3 %	2,2k to 470k	-40 to +80°C	Refrigerators
NTC Thermistors Moulded	2322 641 6....	down to 3 %	2,2k to 22k	-40 to +125°C	Temperature measurement on surface
NTC Thermistors Steelcap	2322 640 90042	down to 1,5%	2,2k to 470k	-25 to +110°C	Central heating system, washing machine sensors
NTC Thermistors ABS pipe type	Customized	down to 1,5%	2,2k to 470k	-40 to +60°C	Refrigerators, freezers
NTC Thermistors Metal Housings	Customized	down to 1,5%	2,2k to 470k	-40 to +125°C	Boilers, central heating systems
NTC Thermistors Ceramic Housings	Customized	down to 1,5%	2,2k to 100k	-25 to +100°C	Boilers, central heating systems
NTC Thermistors Lug	Customized	down to 2 %	2,2k to 470k	-40 to +125°C	Temperature measurement on surface

FEATURES

- NiSn terminations
- Good stability over long life
- Suitable for wave and reflow soldering

FEATURES

- Custom Designed using CAD to Individual Requirements
- Wide Range of Materials and Mounting Styles
- Typical Applications Include Automotive, Refrigeration, Air-conditioning and Industrial Controls.

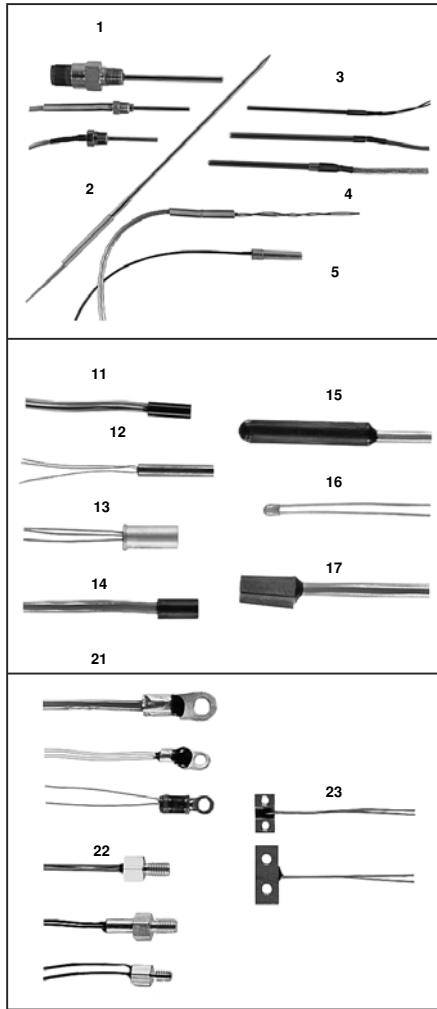

TYPICAL ASSEMBLY STYLES AND APPLICATIONS

Standard and custom assemblies are available in a variety of configurations. The choice of assembly style is dependent on the application. The primary factors which determine the optimum configuration of a thermistor assembly are the operating environment, mounting, time response and minimum dissipation constant.

The two factors which do vary considerably with assembly design are time constant and dissipation constant. The time constant will typically be of greater duration in encapsulated thermistors. This is, of course, due to additional mass surrounding the thermistor element; therefore, extending the thermal transfer time. Dissipation constant will also be greater in assemblies. The additional housing mass serves well as a heat sink. Greater power is therefore required to induce self-heating.

Both time constant and dissipation constant will vary with the selected thermistor and housing. Heat transfer properties of the housing, thermistor location, mass and wire type determine these constants. It is recommended to evaluate or consult the factory in applications where T.C. and D.C. are critical.

• IMMERSION PROBES

1. **Thread Mounted:** Features a stainless steel tube with a hermetically sealed threaded hex fitting. Available in 1/8", 3/16" and 1/4" outer diameter tubes with 1/8" or 1/4" NPT hex fittings. Ideal for pressurized, closed systems.
2. **Penetration Probe:** 7" long x 1/8" outer diameter stainless steel tube. Pointed tip easily penetrates soft and semi-frozen materials. Also ideal for soil and ground measurements.
3. **Tubular Stainless Steel:** 1/8", 3/16" and 1/4" outer diameter tubes in variable lengths. Good for universal immersion applications. Adaptable to use with compression thread mounts to give designer variable immersion depths.
4. **Tubular Pyrex®:** 6" long x 3/16" outer diameter glass tube. Excellent for lab use where a chemically inert probe is required.
5. **Flexible Immersion:** 1.5" long x .280" outer diameter aluminum housing. Flexible 105°C PVC tubing to protect wire and thermistor element from the liquid medium. Ideal assembly for intermittent immersion in hard to reach areas.

• GENERAL PURPOSE SENSORS

11. **Delrin® Housing:** 1/2" long x .170" outer diameter thermoplastic. Excellent for environmental controls and applications below 100°C.
12. **Stainless Steel Rod:** .875" x .156" outer diameter. Good for environmental chamber measurement where corrosive gasses exist.
13. **Gold Anodized Flanged Sensor:** .630" long x .275" outer diameter with a .298" flange diameter. An easy to mount press fitting.
14. **ABS Housing:** .476" long x .230" outer diameter. Black thermoplastic and configuration suits it well in air flow temperature measurements.
15. **Polyester Housing:** 1.50" long x .280" outer diameter. Heavy thermoplastic case makes it ideal for applications requiring delayed time responses. Ideal for process controls in refrigeration and heating.
16. **Epoxy Tip Probe:** Durable epoxy encapsulation, small size, fast time response, versatility and low cost make this sensor universally accepted. Assembly size will vary with wire and thermistor choice.
17. **Pipe Sensor:** .625" long with a cut-out radius of .250" suits this nylon thermoplastic as an ideal pipe sensor. Extensive use is seen in environmental and water heating/cooling systems.

• SURFACE SENSORS

21. **Ring Tongue Lugs:** Surface mount with a #4, #6, #8 or #10 screw. Excellent for measurement and control of surfaces where fast time responses are necessary.
22. **Heat Sink Sensors:** Available in brass, aluminum or stainless steel with various threads. A durable and practical surface sensor, especially where shock and vibration are present.
23. **Rectangular Block Sensors:** Aluminum blocks for measurement and control of large surface areas. Easily mountable with #6 screws.

FEATURES

- Fast acting for safe protection
- Well defined protection levels (trip and non-trip currents)
- High current/size ratio
- Excellent long-term stability
- Protective silicone coating against harsh environments
