**MECHANICAL DATA**

Dimensions in mm

**Encapsulation**

The device is resin coated.

**Terminal connections**

- 1 = Input
- 2, 3, 5, 6 = Common
- 4 = Supply (+)
- 7 = Output.

**Soldering recommendations**

**Hand soldering**

Maximum contact time for a soldering-iron temperature of 260 °C up to the seating plane is 5 s.

**Dip or wave soldering**

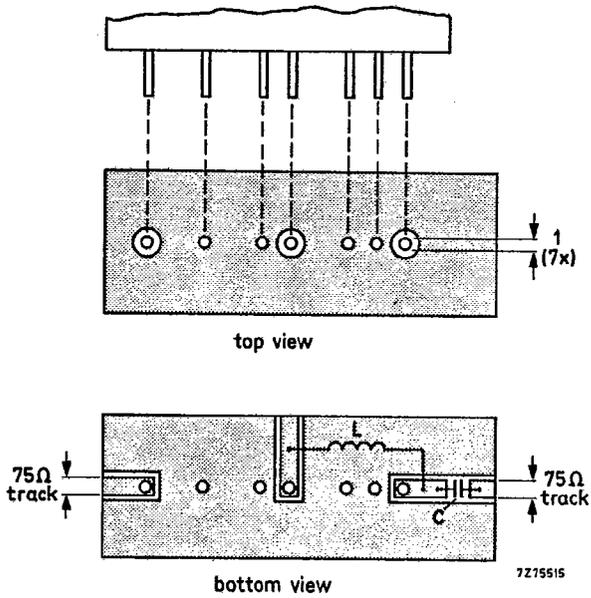

260 °C is the maximum permissible temperature of the solder; it must not be in contact with the joint for more than 5 seconds. The total contact time of successive solder waves must not exceed 5 seconds. The device may be mounted against the printed-circuit board, but the temperature of the device must not exceed 125 °C. If the printed-circuit board has been pre-heated, forced cooling may be necessary immediately after soldering to keep the temperature below the allowable limit.

**Mounting recommendations**

The module should preferably be mounted on double-sided printed-circuit board, see the example shown below.

Input and output should be connected to 75 Ω tracks.

The connections to the 'common' pins should be as close to the seating plane as possible.

$L > 5 \mu\text{H}$ ; e.g. catalogue no. 3122 108 20150 or 27 turns enamelled Cu wire (0,3 mm) wound on a ferrite core with a diameter of 1,6 mm.

$C > 220 \text{ pF}$  ceramic capacitor.
