## Capacitors General Catalog

Aluminum Electrolytic Capacitors with  
Hybrid Conductive Polymer

**EP-cap**

Aluminum Electrolytic Capacitors

### PRECAUTIONS

- The contents of this catalog are current as of May 2011. They may change without prior notice. When ordering products, please be sure to request a delivery specifications form and read it carefully.
- Products described herein are not intended for applications requiring extremely high reliability (for example, those in which extensive human injury or property damage may occur such as with life-support systems or aircraft control systems). For such applications, consult our sales department.
- The performance, characteristics, and features of the products described in this catalog are based on the products working alone under prescribed conditions. Data listed here is not intended as a guarantee of performance when working as part of any other product or device. In order to detect problems and situations that cannot be predicted beforehand by evaluation of supplied data, please always perform necessary performance evaluations with these devices as part of the product that they will be used in.
- When using the products listed in this catalog, please always be sure to try to prevent any possible accidents or injury by designing products in a careful and safe manner. If you have any questions concerning the use of these products, please contact any of our sales representatives.
- For any products listed in this catalog that may constitute restricted trade goods under overseas exchange or service trade laws, permission to deliver according to law may be required before importing.
- Unauthorized duplication of this catalog in part or in whole is forbidden.
- Please understand that we cannot be held responsible for any damages to the industrial properties of any third party that arise from the use or application of the products listed in this catalog, with the exception of those items directly related to method of construction.

### ISO Certificates

#### ISO/TS 16949

Izumo Plant · Head office

Certificate Number CERT-11075-2006-AQ-HOU-IATF (IATF 0080981)

Masuda Plant · Head office

Certificate Number CERT-11075CC1-2006-AQ-HOU-IATF (IATF 0080982)

#### ISO 9001

Izumo Plant · Masuda Plant · Head office Certificate Number 01571-2001-AQ-KOB-JAB

#### ISO 14001

Izumo Plant · Masuda Plant Certificate Number EMS 03 029

## ■ System Diagram for Power supply

## FOR SECONDARY SMOOTHING CIRCUIT

## FOR PRIMARY SMOOTHING CIRCUIT (MID. &amp; HIGH VOLTAGE)

Please observe the following guidelines when using aluminum electrolytic capacitors. (Hereafter "Capacitors")

## Circuit Diagram

- 1) Please use according to the values noted in the catalogue or the specification sheet when considering the application and use of the capacitors.
- 2) Please use according to the temperature range and rated ripple current as noted in the catalogue or the specification sheet.
  - a) Life time of electrolytic capacitors depends on the ambient temperature.  
Generally the life time would be doubled as the temperature decreased by 10 degrees.  
It is recommended that capacitors be used at a lower temperature than that of the maximum warranty as possible.
  - b) Capacitors should be used at current values within the rated ripple current.  
If capacitor bears excessive ripple current, heat generation acutely increases, therefore decreasing capacitance or even damage the capacitor. Please refer to the rated ripple current of each series.
- 3) Please choose the capacitor that matches the lifetime of the intended circuit design.
- 4) Regular capacitors have polarity. If electrical current is applied in the opposite direction to a capacitors polarity, the result could be a short circuit or destruction of the capacitor.  
Bi-polar capacitors should be used in circuit where polarity is occasionally reversed, or where polarity is unknown. (except AC)
- 5) In circuits where frequent charge and discharge are common, capacitance decrease as the internal overheat causes damage to capacitors. In such circuits, please use charge and discharge proof capacitors.
- 6) Do not apply DC-voltage exceeding rated voltage of the capacitors.
- 7) The exterior sleeve of a capacitor is not guaranteed as an insulator.  
Do not use the capacitor where insulation is required.  
The aluminum case of a capacitor is not insulated from a cathode lead wire.
- 8) Do not use in the following environments.
  - a) In the environments of splashed water, salt water, and oil on the capacitors.
  - b) In the presence of poisonous gas. (Hydrogen sulfide, Sulfurous acid, Chlorine, Ammonia, etc)
  - c) In the environments of applied ozone, ultraviolet rays and radial rays.
  - d) Where vibration or shock exceeds the allowable values as noted in the catalogue or specification sheet.
- 9) Please design after confirming the following points concerning the application and use.
  - a) Please match the leads space with the holes space of the circuit board.
  - b) It is recommended at least 3mm of space around the pressure relief vent.
  - c) Avoid placing to printed wire above the pressure relief vent.
  - d) Make a hole on a circuit board if the top of an aluminum case is positioned below the circuit board at short distance.  
The hole is to make the passage of gas from a safety vent when the vent opens.
- 10) Avoid having the printed wire under the capacitor.

- 11) Avoid placing other parts near or on the opposite side of the circuit board from the capacitor which gives off heat.
- 12) As for the land pattern of surface mount type capacitors, please refer to the values noted in the catalogue or specification sheet.
- 13) Please design after confirming these other following points.
  - a) The performance of the capacitor will vary as the temperature or frequency varies.
  - b) If capacitor is mounted to the double sided circuit board, avoid placing through holes under capacitors.
  - c) Please consider the balance of the current when using two or more capacitors in parallel.
  - d) Please consider the balance of the voltage when using two or more capacitors in series.

## Mounting

- 1) Do not use a capacitor that has been inserted and connected to a current.  
Except for capacitors that have been removed to check the electrical properties during periodical checks, do not reuse.
- 2) In case the capacitor has re-striking-voltage, please discharge through 1kΩ resistor.
- 3) In case the leakage current increases with long term storage, please apply the rated voltage to the capacitor for 30 minutes through 1kΩ of protective series resistors.
- 4) Please mount capacitor after confirmation of following rates : rated capacitance, rated voltage.
- 5) Please mount after confirming the polarity of capacitor.
- 6) Do not drop or use dropped pieces.
- 7) Be careful not to deform the capacitor during installation.
- 8) Be careful not to puncture the aluminum case of a capacitor with excessive impact.
- 9) When mounting capacitors to the circuit board, please use capacitors that the lead space equal the hole space of the circuit board.
- 10) When mounting capacitors with automatic inserting machines, do not apply excessive force to the lead wire or terminals.
- 11) When mounting capacitors with automatic inserting machines, do not apply excessive force to the body of capacitors.
- 12) Please confirm the following points when you solder with a soldering iron.
  - a) Follow the criteria of soldering condition including time and temperature noted in a catalogue or a specification.
  - b) Process the shape of lead wires before soldering when the lead wire space of a capacitor does not match the through hole space of a circuit board. Avoid the stress to the body of the capacitor.
  - c) Melt solder enough to rework a capacitor with a soldering iron after removing it from a circuit board.  
Insufficence of melting solder causes physical stree to lead wires.
  - d) Do not touch the body of a capacitor with the tip of a soldering iron.

- 13) Please confirm the following points when you perform flow soldering.
  - a) Do not soak a capacitor in melt solder. Perform flow soldering only on the opposite side of a circuit board where no capacitor is placed.
  - b) Follow the instruction in a catalogue or a specification with regard to the soldering condition; preheat, soldering temperature, and soaking time.
  - c) Avoid the attachment of flux to the body of a capacitor except lead wires.
  - d) Do not locate a capacitor where metal lead wires of the other components contact with the capacitor.
- 14) Please confirm the following points when you perform reflow soldering.
  - a) Follow the specifications for pre-heat, reflow time and peak temperature as noted in the catalogue or specification sheet.
  - b) The absorption coefficient of infrared rays depends on the color and material of a capacitor.  
Avoid heating too much to a capacitor by an infrared heater.
- 15) After mounting the circuit board, do not apply the following mechanical stress.
  - a) Do not apply excessive force to the lead wires or terminals.
  - b) Do not tilt or bring down the capacitor.
  - c) Do not pick up circuit board by holding the mounted capacitor.
  - d) Do not jolt the capacitor. When stacking circuit boards, make sure the capacitor does not come into contact with any other parts.
- 16) In principle, aluminum electrolytic capacitors are not designed to withstand to the cleaning solvent.  
If cleaning of a board is necessary, select capacitor designed to withstand cleaning process, and observe the cleaning conditions specified in the catalogue or in the manufacturer's specification.  
Do not clean the capacitors using solvent, unless so specified in catalogue or manufacturer's specification.  
Use of one of the following chemicals for cleaning may damage the capacitor.
  - a) Solvent containing halogen ions : Damage due to electrolysis of elements
  - b) Alkaline solvent : Corrosion of the aluminum case
  - c) Xylene : Degradation of sealing rubber
  - d) Acetone : Disappear of markings.
  - e) Terpene, petro-based solvents : Degradation of sealing rubber
- 17) When cleaning solvent proof capacitors, please confirm the following points.
  - a) Please manage the pollution of the cleaning solvent. (conductivity, pH, specific gravity, content of water, etc)
  - b) Do not keep in the environments of cleaning solvents or airtight containers, after cleaning the capacitors.  
Please dry the circuit board and capacitors in a hot blast stove within upper category temperature or less.
- 18) When using polymer adhesives, select adhesives without halogenated solvents, nor chloroprene.
- 19) Please confirm the following when using coating agents and polymer adhesives.
  - a) When adhesion or coating is performed after cleaning, air dry should be made immediately remove cleaning solvent between capacitors and circuit board.
  - b) Avoid the treatment that cover the seal of the capacitor, such as coating agents and use of polymer adhesive.

## During operation or use

- 1) Do not directly touch the capacitor.
- 2) Do not short two lead wires with any conductive material.  
Do not spray acid or alkali conductive solution to a capacitor.

- 3) Confirm the following concerning the operating environments.
  - a) In the environments of splashed water, salt water, and oil on the capacitors.
  - b) Where a capacitor is exposed to direct sunshine.
  - c) In the environments of applied ozone, ultraviolet rays and radial rays.
  - d) Where vibration or shock exceeds the allowable values as noted in the catalogue or specification sheet.

## Maintenance • Inspection

- 1) For industrial use, please periodically check the capacitor.
- 2) When checking, inspect the following points.
  - a) Outside appearance.
  - b) Electrical performance. (Leakage current, Capacitance, Tangent of loss angle, etc)

## In case a problem occurs

- 1) While using the application, if you see gas, turn off the main power supply to the set or remove the plug from the outlet.
- 2) When working with a pressure relief vent, high temperature gas spouts out, therefore, do not bring the face close to the capacitor.
- 3) In case spouted gas got into the eye, immediately wash with the water.  
In case you breath spouted gas, immediately rinse out your mouth.

## Storage conditions

- 1) Do not store at high temperatures or in high humidity. Please store indoors between 5°C and 35°C at 75% relative humidity or below. Product is safekeeping for less than 1 year after shipment.
- 2) Do not store where it can come into contact with water, oil, or salt water.
- 3) Do not store in an environment with poisonous gas. (Hydrogen sulfide, Sulfurous acid, Chlorine, Ammonia, etc)
- 4) Do not store in an environment that applies ozone, ultraviolet rays, radial rays.

## Scrap of capacitors

Please follow these guidelines when scrapping the capacitors.

- a) Burn after putting a hole in the capacitor or crush the capacitor.
- b) If you do not burn it, please arrange for a professional waste management firm to bury or use other method to scrap.

This guide to use aluminum electrolytic capacitors conform to technical report EIAJ RCR-2367B "Guideline of notabilia for fixed aluminum electrolytic capacitors for use in electronic equipment".

Please refer to this technical report for additional details.

### ■ We promote the activities which are considered for ecology.

The environmental products are available with Pb-free products which don't include Pb in terminals of main body and PVC-free products which don't include exterior materials. Please contact us about the specification etc.

#### ■ Environmental Products (Compliance of RoHS Directive)

	Surface Mount Type Aluminum Electrolytic Capacitors		Radial Lead Type Aluminum Electrolytic Capacitors	
Type code	CE, HV★1	CE_T	ME	MB, HE_T
Kind of plating	(φ3 to φ12.5) 	(φ16, φ18) 		
Model No. (example)	10CE100BS (100 μF/10V)	10CE4700BST (4700 μF/10V)	10ME100AX (100 μF/10V)	10MB100UWG (100 μF/10V)
Sleeve	No used	No used	PET	No used
Moisture Sensitivity Level (MSL)★2	Not applicable No need dry package	Not applicable No need dry package	Not applicable No need dry package	Not applicable No need dry package

★1 Sn plating terminal of Surface Mount Type : "CE\_T", "HV\_T"

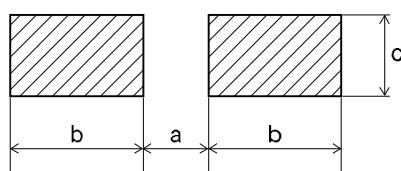

★2 Conform to IPC/JEDEC J-STD-020C

### ■ Regarding compliance to European REACH Regulation.

According to the content of RIP3.8TGD (Technical Guidance Document) which is published on 26 May 2008, our electronic components are "articles without any intended releas". Therefore they are not applicable for "Registration" for European REACH Regulation Article 7 (1).

### ■ Surface Mount Type Recommended Land Pattern

#### ● Land pattern

Size	a	b	c	(Unit:mm)
φ3	0.8	2.2	1.7	
φ4	1.0	2.6	1.8	
φ5	1.4	3.0	1.8	
φ6.3	1.8	3.6	1.8	
φ8	2.8	4.1	2.1	
φ10	4.3	4.4	2.5	
φ12.5	4.3	5.8	2.5	
φ16	6.6	6.5	5.0	
φ18	6.6	7.7	5.0	

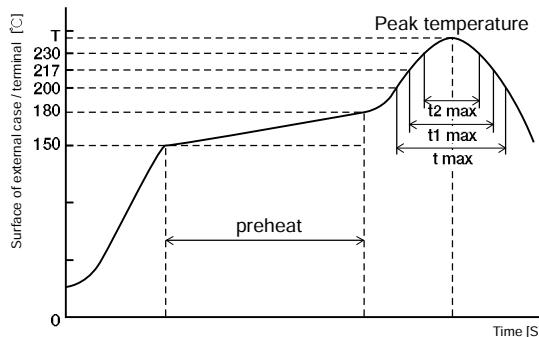

When using large surface mount capacitor, please design possibly larger land pattern area than the recommended pattern dimension in order to increase vibration resistance and avoid to falling off a circuit board.

## ■ Soldering Condition

- Soldering with a soldering iron - within  $350^{\circ}\text{C} \times 3$  seconds unless otherwise specified in the spec.
- Flow soldering - within  $260^{\circ}\text{C} \times 10$  seconds unless otherwise specified in the spec.  
(Do not apply flow soldering to SMD type.)
- Thermal curing over - ambient temperature within  $150^{\circ}\text{C} \times 2$  minutes.

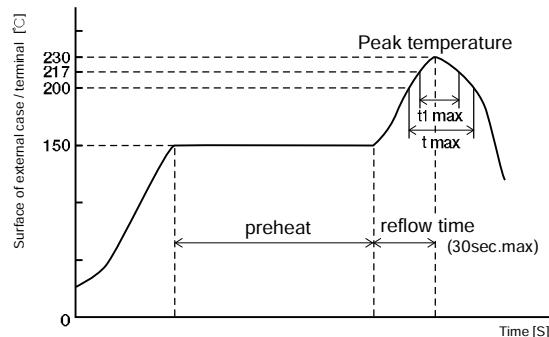

## ■ Recommended Reflow Condition

●Profile 1  
AIR reflow and IR reflow

Preheat ;  $150^{\circ}\text{C}$  to  $180^{\circ}\text{C}$ , Within 120sec.

●Profile 2  
AIR reflow and IR reflow

Preheat ;  $150^{\circ}\text{C}$ , Within 120sec.

Series	Voltage (V)	Size	Time for more than $200^{\circ}\text{C}$ (t)	Time for more than $217^{\circ}\text{C}$ (t1)	Time for more than $230^{\circ}\text{C}$ (t2)	Peak temperature (Within 5sec.)	Profile

Capacitors can withstand two reflow processes on the above conditions. Second reflow shall be taken after more than one hour natural cooling time and taken after the return to normal temperatures of PCB board and components.

Anti-vibration structure(CA Type) ; Please contact us about the reflow condition.

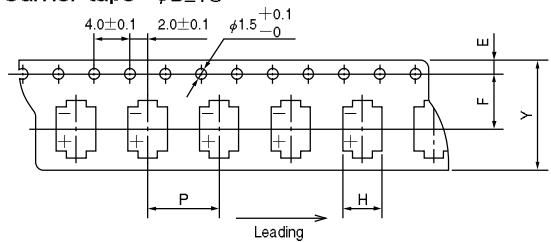

Please refer to page 21 for Recommended Reflow Condition of EP-cap.

**■ Model No.**Available for  $\phi 8$  to  $\phi 16$  in all series of Surface Mount Type.

# EP-cap

The EP-cap is an aluminum electrolytic capacitor with a hybrid cathode formed by combining an electrolyte and electroconductive polymer with high conductivity.

EP-cap have very low ESR at high frequency as compared with electrolytic capacitors.

The structure of hybrid cathode electrolyte enables EP-cap to have the same self-healing function as aluminum electrolytic capacitors.

EP-cap have hi-reliability product of 125°C (HVP series), 135°C (HVT series) and high voltage up to 125V.

*Super low ESR-High reliability  
creates the future.*

# EP-cap

- Super low ESR
- Rated voltage is up to 125V.
- High reliability product of 135°C
- High ripple long life.
- Self-healing property of liquid electrolyte.
- Excellent low temperature characteristics.

## HVA series

## HVH series

## HVP series

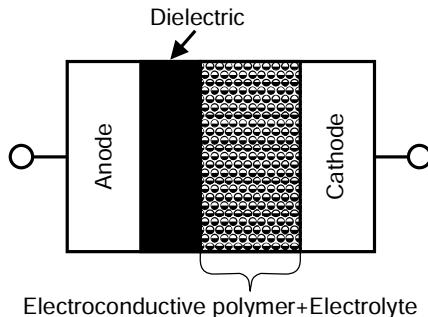

## HVT series

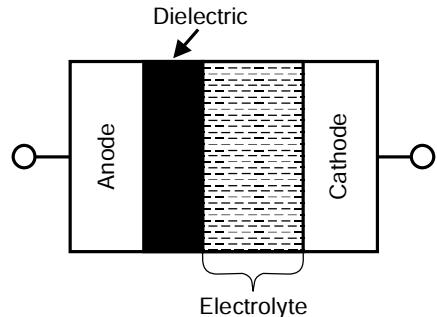

## Basic Construction / Features / Applications / Product Line-up Table

## ■ Basic Construction

## ■ EP-cap

## ■ Electrolytic Capacitor

## ■ Features

- **Super low ESR**  
(Downsize and upgrade your circuit)
  - Excellent noise absorption capability at high frequency.
  - High ripple current. Suitable for smoothing circuit of switching regulator.
- **Excellent low temperature characteristics**  
(Stable performance at low temperature range)
- **Self-healing property of liquid electrolyte**  
(Compared to solid capacitors, short circuit mode seldom happen and L.C. is lower.)

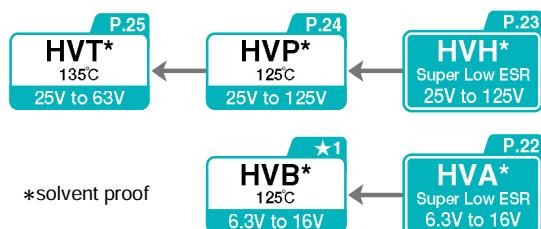

- Rated voltage is up to 125V.
- Applying a voltage up to the rated voltage is guaranteed.  
(Voltage derating is not needed)
- RoHS compliance and lead-free  
(Environmental friendly)

## ■ Applications

- Automotive electric • Network • Industrial
- Flat-TV(LCD,PDP etc.) • PC(Server etc.)
- Power supply(Inverter etc.)

**EP-cap** (Hybrid type)

For high performance of electronic devices

For miniaturize, low Profile, and light weight

For high-density mounting

For high temperature reflow soldering

For high productivity by the surface mount technology

## Soldering Condition / Recommended Reflow Condition / Ripple Current Frequency Coefficient

**■ Soldering Condition**

- Soldering with a soldering iron - within  $350^{\circ}\text{C} \times 3$  seconds unless otherwise specified in the spec.
- Flow soldering - within  $260^{\circ}\text{C} \times 10$  seconds unless otherwise specified in the spec.  
(Do not apply flow soldering to SMD type.)
- Thermal curing over - ambient temperature within  $150^{\circ}\text{C} \times 2$  minutes.

# Aluminum Electrolytic Capacitors

Aluminum Electrolytic Capacitors is hard to be in Short-mode because, it has Shelf-healing mechanism at the dielectric layer by its electrolyte. Aluminum Electrolytic Capacitors supply wide range of capacitance and voltage. They are suitable for economical circuit design.

## Features

- Wide rated voltage range from 4V to 450V
- Wide capacitance range from  $0.47\mu F$  to  $15000\mu F$
- Self healing of the dielectrics (aluminium oxide film ) after damages.
- The main failure mode is of wear-out. Short circuit within capacitor is not appreciable.
- No voltage dependence of capacitance.
- Can withstand applied pulse current and pulse voltage compared to other types of capacitors.

## Applications

Automotive electric, Network equipment, Industrial equipment, Digital equipment, Consumer equipment, PC etc.

RoHS compliance

# CE-AX Series

Low Impedance

- 105°C, 1,000 to 2,000hrs.
- Solvent proof (within 2 minutes)

## ■ Specifications

Items	Condition	Specifications							
CE-BJ	Rated voltage (V)	—	6.3	10	16	25	35		
CE-BE	Surge voltage (V)	Room temperature	8.0	13	20	32	44		
CE-BD	Category temperature range (°C)	—	-55 to +105						
CE-BSS	Capacitance tolerance (%)	120Hz/20°C	M : ±20						
CE-BS	Dissipation Factor (tan δ)	120Hz/20°C	φ4 to φ6.3	0.24	0.20	0.16	0.14		
CE-FE			φ8 to φ16	0.28	0.24	0.20	0.16		
CE-FD	When rated capacitance exceeds 1,000μF, add 0.02 to the value above for each 1,000μF increase.								
CE-LD	Leakage current(LC)	μA/after 2minutes (max)	The greater value of either 0.01CV or 3						
CE-FSS	Impedance ratio at low temperature	Based the value at 120Hz, +20°C	-40°C Z/Z20°C	3	2	2	2		
CE-FU			-55°C Z/Z20°C	5	4	4	3		
CE-FS	Endurance	105°C rated voltage applied (With the rated ripple current)	Test	φ4 to φ6.3, φ10×7.7 : 1,000hrs., φ8 to φ16 : 2,000hrs.					
CE-FH			△C/C	Within ±25% of the initial value					
CE-GA			tan δ	≤ 2 times the initial specified value					
CE-AX			LC	≤ The initial specified value

★1 CXL series  
★2 CXS series

## ■ Model No.

# ME-AX Series

Low Impedance

Long Life

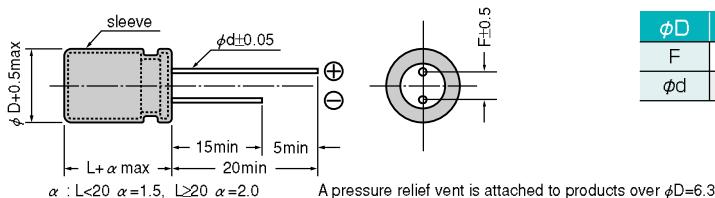

- 105°C, 2,500 to 10,000hrs.
- Solvent proof (within 5 minutes)

## ■ Specifications

Items	Condition	Specifications								
Rated voltage (V)	—	6.3	10	16	25	35	50	63	100	
Surge voltage (V)	Room temperature	8.0	13	20	32	44	63	79	125	
Category temperature range (°C)	—	-55 to +105						-40 to +105		
Capacitance tolerance (%)	120Hz/20°C	M : ±20								
Dissipation Factor (tanδ)	120Hz/20°C	0.22	0.19	0.16	0.14	0.12	0.10	0.10	0.10	
Leakage current(LC)	μA/after 2minutes (max)	The greater value of either 0.01CV or 3								
Impedance ratio at low temperature	Based the value at 120Hz, +20°C	-40°C Z/Z20°C	3	2	2	2	2	2	2	
		-55°C Z/Z20°C	4	4	3	3	3	2	2	
Endurance	105°C rated voltage applied (With the rated ripple current)	Test	φ5 : 2,500hrs., φ6.3 : 3,000hrs., φ8×11.5, φ8×12.5 : 3,500hrs., φ8×15, φ8×20 : 4,500hrs., φ10 : 5,000hrs., φ12.5 : 7,000hrs., φ16 to φ18 : 10,000hrs.							
		△C/C	Within ±20% of the initial value							
		tan δ	≤ 2 times the initial specified value							
		LC	≤ The initial specified value

★1 AXL series

## Aluminum Electrolytic Type / Radial Lead Type

### **RoHS compliance**

# ME-WX Series

### Low Impedance

## High Ripple Current

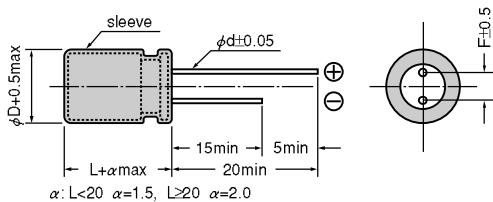

- 105°C, 2,000 to 5,000hrs.
  - Do not clean the capacitors using solvent.

## ■ Specifications

Items	Condition		Specifications					
Rated voltage (V)	–		6.3	10	16	25	35	50
Surge voltage (V)	Room temperature		8.0	13	20	32	44	63
Category temperature range (°C)	–		–40 to +105					
Capacitance tolerance (%)	120Hz/20°C		M : ±20					
Dissipation Factor (tanδ)	120Hz/20°C		0.22	0.19	0.16	0.14	0.12	0.10
			When rated capacitance exceeds 1,000μF, add 0.02 to the value above for each 1,000μF increase.					
Leakage current(LC)	μA/after 2minutes (max)		0.01CV					
Impedance ratio at low temperature	Based the value at 120Hz, +20°C	–25°C Z/Z <sub>20°C</sub>	2	2	2	2	2	2
		–40°C Z/Z <sub>20°C</sub>	3	3	3	3	3	3
Endurance	105°C rated voltage applied (With the rated ripple current)	Test	φ5 to φ6.3 : 2,000hrs., φ8 : 3,000hrs., φ10 to φ12.5 : 4,000hrs., φ16 : 5,000hrs.					
		△C/C	Within ±25% of the initial value					
		tan δ	≤ 2 times the initial specified value					
		LC	≤ The initial specified value					

## ■ Dimensions

A pressure relief vent is attached to products over  $\phi D=6.3$ .

$\phi D$	5	6.3	8	10	12.5	16
