**Turn ON/OFF Sequences (for optimizing the POP performances)**

**A) USING MUTE AND STAND-BY FUNCTIONS**

**B) USING ONLY THE MUTE FUNCTION**

To simplify the application, the stand-by pin can be connected directly to Ground.

During the ON/OFF transitions we recommend to respect the following conditions:

- At the turn-on the transition mute to play must be made when the SVR pin is higher than 2.5V
- At the turn-off the TDA7495 must be brought to mute from the play condition when the SVR pin is higher than 2.5V.
