TC4532BP 8-BIT PRIORITY ENCODER

TC4532BP is eight bit encoder which detects "H" level of the highest order among eight input signals and outputs the corresponding signal position in binary code.

The inputs are eight input signals of D0 through D7 and E_{IN}, and when E_{IN} is set to "L" level, the encode operation is inhibited making all the outputs at "L" level.

The encoded output appears on three signal lines Q0 through Q2 in binary. E_{OUT} and G_s are the outputs to indicate the operational mode of encoder and used when the number of bits is to be increased by cascade connection.
